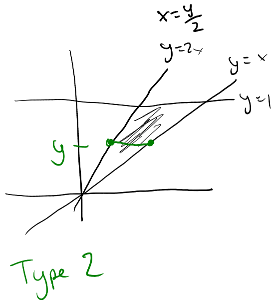
1. Evaluate the following.

   (a) **[4 points]** $\iint_R \sin(y^2)\,dA$ where R is the triangular region bounded by $y = x$, $y = 2x$, and $y = 1$.



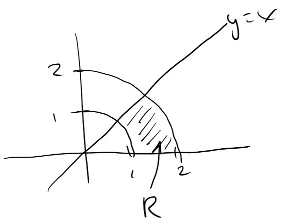
$$\iint_R \sin(y^2)\,dA = \int_0^1 \int_{\frac{y}{2}}^{y} \sin(y^2)\,dx\,dy = \int_0^1 \left[\sin(y^2)\int_{\frac{y}{2}}^{y} 1\,dx\right] dy$$

$$= \int_0^1 \sin(y^2)\,[x]_{x=\frac{y}{2}}^{x=y}\,dy = \int_0^1 \sin(y^2)\left[y - \frac{y}{2}\right] dy = \frac{1}{2}\int_0^1 y\sin(y^2)\,dy \qquad \begin{array}{l} u = y^2 \\ du = 2y\,dy \end{array}$$

$$= \frac{1}{4}\int_0^1 \sin(y^2)\,2y\,dy = \frac{1}{4}\int_{0^2}^{1^2} \sin(u)\,du = \frac{1}{4}(-\cos(u))\Big|_{u=0}^{1} = \frac{1}{4}\left(-\cos(1) + \cos(0)\right)$$

$$= \boxed{\frac{1}{4}\left(1 - \cos(1)\right)}$$

   (b) **[4 points]** $\iint_R x\,dA$ where R is the region between the circles $x^2 + y^2 = 1$ and $x^2 + y^2 = 4$ above the line $y = 0$ and below the line $y = x$.



$$\iint_R x\,dA = \int_0^{\pi/4}\int_1^2 (r\cos\theta)\,r\,dr\,d\theta = \int_0^{\pi/4} \cos\theta \cdot \int_1^2 r^2\,dr\,d\theta$$

$$= \int_0^{\pi/4} \cos\theta \left(\frac{1}{3}r^3\right)_{r=1}^{r=2} d\theta = \int_0^{\pi/4} \cos\theta\left(\frac{1}{3}\cdot 8 - \frac{1}{3}\cdot 1\right) d\theta = \frac{7}{3}\int_0^{\pi/4} \cos\theta\,d\theta$$

$$= \frac{7}{3}\sin\theta\Big|_0^{\pi/4} = \frac{7}{3}\left(\sin(\pi/4) - \cancelto{0}{\sin(0)}\right) = \frac{7}{3}\cdot\frac{\sqrt{2}}{2} = \boxed{\frac{7\sqrt{2}}{6}}$$

   (c) **[2 points]** $\int_{-\infty}^{\infty} e^{-2x^2}\,dx$

$$I = \int_{-\infty}^{\infty} e^{-2x^2}\,dx$$

$$I^2 = \left(\int_{-\infty}^{\infty} e^{-2x^2}\,dx\right)\left(\int_{-\infty}^{\infty} e^{-2y^2}\,dy\right)$$

$$= \iint_{\mathbb{R}^2} e^{-2(x^2+y^2)}\,dA$$

$$= \int_0^{2\pi}\int_0^{\infty} e^{-2r^2}\,r\,dr\,d\theta \qquad \begin{array}{l} u = 2r^2 \\ du = 4r\,dr \end{array}$$

$$= \frac{1}{4}\int_0^{2\pi}\int_0^{\infty} e^{-2r^2}\cdot -4r\,dr\,d\theta$$

$$= \frac{1}{4}\int_0^{2\pi}\int_0^{\infty} e^{-u}\,du\,d\theta = \frac{1}{4}\int_0^{2\pi} \left(-e^{-u}\right)_0^{\infty} d\theta$$

$$= \frac{1}{4}\int_0^{2\pi}\left(-\cancelto{0}{\frac{1}{e^{\infty}}} - (-e^0)\right) d\theta = \frac{1}{4}\int_0^{2\pi} d\theta = \frac{2\pi}{4}$$

$$= \frac{\pi}{2}. \qquad \text{So } I = \sqrt{I^2} = \boxed{\sqrt{\frac{\pi}{2}}}.$$
