1. **[2 parts, 6 points each]** A particle travels in a straight line at constant speed. At time $t = 0$, the particle is at $P(2, -1, 4)$, and at time $t = 1$, the particle is at $Q(5, 0, 3)$.

   (a) Find parametric equations for the position of the particle at time t.

   (b) Find the speed of the particle.

2. **[6 points]** A particle starts at $P(1, 2, 3)$ at time $t = 0$ and has velocity vector $\mathbf{r}'(t) = \left\langle 2t, \sin t, t^2 \right\rangle$. Find the position vector $\mathbf{r}(t)$.

3. **[8 points]** A particle has position vector $\mathbf{r}(t) = \left\langle t^2, t, t^2 - 3t \right\rangle$. Find the minimum speed of the particle.

4. **[3 parts, 8 points each]** Let $\mathbf{r}(t) = \left\langle t, t^2, t^3 \right\rangle$ and note that at $t = 1$, the normal vector $\mathbf{N}$ equals $\frac{1}{\sqrt{2 \cdot 7 \cdot 19}} \langle -11, -8, 9 \rangle$.

   (a) Find the tangent vector $\mathbf{T}$ and binormal vector $\mathbf{B}$ at $t = 1$.

   (b) Find vector equations for the normal plane and osculating plane at time $t = 1$.

   (c) Find the radius and center of the osculating circle at $t = 1$.

5. Let $f(x, y) = x\sin(2x + 3y)$.

   (a) **[12 points]** Find all first and second partials of $f(x, y)$.

   (b) **[6 points]** Find a vector equation for the tangent plane to the graph of $f(x, y)$ at $(\pi/4, 0, \pi/4)$.

6. **[2 parts, 6 points each]** The temperature at a point (x, y, z) is given by the function $T(x, y, z) = x^2y + 3z^2$.

   (a) Find the rate of change in temperature if we start at $(1, -3, 2)$ and move toward the origin.

   (b) Starting at $(1, -3, 2)$, we want to increase the temperature is quickly as possible. In which direction should we travel, and what is the rate of increase?

7. **[10 points]** Let $f(x, y, z) = \ln(x^2 + y^2 + z^2)$ and let $x(s, t) = 2s + 3t$, $y(s, t) = st$, and $z(s, t) = s^2 e^t$. Compute $\frac{\partial f}{\partial s}$ when $s = 2$ and $t = 0$.

8. **[10 points]** Find and classify the critical points of $f(x, y) = xy^2 - x^2y + 4x - 4y$ as local minima, local maxima, or saddle points.
